Test Summary Report: MindBridge Course Checkout and Enrollment

1. Executive Summary

The test cycle for the Course Checkout and Enrollment feature concluded with an overall pass rate of 85% across 100 test executions. Crucially, all open critical defects have been resolved, with zero remaining release-blocking issues. Based on the test metrics and risk profile, the final recommendation for this release is **GO**.

2. Test Execution Metrics

Execution Status	**Count**	**Percentage**
Passed	85	85%
Failed	10	10%
Blocked	5	5%
Unexecuted	0	0%
Total	**100**	**100%**

3. Defect Highlights & Release Blockers

- **Total Linked Defects:**14
- **Critical Open Defects:** 0
- **High Open Defects:**3
- **Medium/Low Open Defects:** 9
- Resolved &Verified Defects (Closed):2

Key Defect Status Changes:

- **DEV-8761 (Critical):**Payment processing crash on Amex cards-Fixed&Verified
- **DEV-8762 (Critical):** Course access timeout during peak gateway lag- Fixed&Verified

4. Go/No-Go Recommendation & Justification

Recommendation: GO
Justification: The release is recommended for production deployment because there are 0 open critical defects. Both high-severity issues (DEV-8761 and DEV-8762) identified during testing have been successfully fixed and verified.

The 10 failed tests are linked to minor visual alignment and localization text discrepancies in the receipt footer, which do not impact core payment or enrollment functionality. The 5 blocked tests were caused by a temporary external sandbox outage that has since been resolved and verified stable. The remaining 12 open defects (3 High, 9 Medium/Low) do not block core workflows and can be safely deferred to subsequent minor patch releases.

5. Known Issues & Deferred Bugs

The following minor defects are being carried into this production deployment. Product Support and relevant stakeholders should be aware of these behaviors:

1. **DEV-8770 (Medium/Low):** Localized text discrepancy in the receipt footer for specific regional formats.
2. **DEV-8775 (Medium/Low):** Minor visual alignment issue in the receipt footer layout on mobile browsers.
